Trucks & buses
parts factsheet

From inefficient parts handling to streamlined workflows

Parts challenges faced by trucks & buses businesses

Inventory management	Supply chain complexities	Quality assurance	Parts tracking
Parts replacements	Obsolete parts management	Emergency response	

Seamless parts operations from beginning to end with A365

A365 simplifies all aspects of parts management activities, delivering an exceptional customer experience, enhancing supplier relationships, streamlining processes, and reducing costs to support effective parts support.

A365 adds value for customers, service centers, dealerships, and Original Equipment Manufacturers (OEMs) by facilitating and streamlining parts intelligence, counterfeit parts detection, optimized parts inventory, supplier management, and cost-effective parts procurement.

01
Effortlessly manage parts ordering and inventory control

02
Customize parts and inventory optimization support and access standardized and extended parts features

03
Streamline communication for parts availability

04
Develop a fully functional connection to vehicle maintenance and servicing

Parts

Spare parts catalogs
Maintain organized catalogs of spare parts for easy reference and ordering.

Advanced parts classification
Classify parts with advanced categorization for efficient inventory management.

Reman parts management
Manage remanufactured parts efficiently within the spare parts inventory.

Core management
Track and manage core parts, facilitating core returns and remanufacturing.

Multi-level parts supersessions
Handle multi-level supersessions of parts seamlessly to manage changes effectively.

Alternative and supplementary parts
Provide alternative and supplementary part options to meet customer needs.

Real-time inventory tracking
Track spare parts inventory in real-time for accurate availability information.

Multiple inventory locations
Manage spare parts across multiple locations to optimize inventory distribution.

Serialized inventory tracking
Implement serialized tracking for individual parts, enhancing accuracy.

Reorder point & safety stock
Set up reorder points and safety stock levels to ensure efficient inventory replenishment.

Cycle counting & physical inventory
Conduct cycle counting and physical inventory checks to maintain inventory accuracy.

Barcode and RFID support
Utilize barcode and RFID technology for efficient spare parts tracking.

Supplier catalog management
Manage supplier catalogs for easy reference and ordering of parts.

Refunds/advanced returns
Process refunds and handle advanced returns efficiently for returned parts.

Automated price updates
Automate the updating of spare parts prices to reflect accurate pricing.
